STG2- (B2) U.S. Patent (with pre-grant pub.) after Jan. 2, 2001  
AB - A measuring vessel has cavity-defining wall structures and at least one ramp which rises from about the bottom of the wall structure toward the top of the wall structure. The at least one ramp has an upwardly directed surface with a lateral inner edge integral with portions of the wall structure below the ramp and a lateral outer edge integral with portions of the wall structure below the ramp. Indicia on the upwardly directed surface of the at least one ramp allows a user to look downwardly into the measuring vessel to visually detect the volume level of the contents in the vessel, thereby eliminating the need to look horizontally at the vessel at eye level. Preferably the vessel has two ramps, with at least one bearing indicia of standard English units, and another bearing indicia of metric units. In one embodiment a handle, covered with a cushioning grip sheath, is cantilevered from the top of the wall structure and has a distal end at the level of the bottom of the wall structure for cooperation therewith to support the vessel on an underlying support surface.

## No Documents Found!

No documents were found for your search terms

"6543284 or 6,543,284"

---

Click "Save this search as an Alert" to schedule your search to run in the future.

- OR -

Click "Edit Search" to return to the search form and modify your search.

Suggestions:

- Check for spelling errors.
- Remove some search terms.
- Use more common search terms, such as those listed in "Suggested Words and Concepts"
- Use a less restrictive date range.
